Vater CA;
                                                                                                            This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Mucls protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of a peptide which was used for raising antibodies to the extracellular, non-shed region of Mucl6 and which is claimed in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     monoclonal antibody; epitope; non-shed extracellular portion; shed antigen; human; Muc1; Muc16; cytostatic; gene therapy; malignancy; breast cancer; ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibody to non-shed human Muc1 or Muc16, useful for diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 14; SEQ ID NO 16; 113pp; English.

Vater CA;
                                                                                                                                                                                                                                                                                                                                                                                                                         specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Mucl6 protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of a Muc epitope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antibody to non-shed human Muc1 or Muc16, useful for diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer.

The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of the human Mucl6 GST fusion protein which was used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Payne G,

Specifically, it refers to a screening assay to identify potential antitumour agents, as well as methods to assess the cancerous state of a cell. The present invention describes antibodies against the expression products of these cancer-related genes that are capable of targeting a cancerous cell in vivo. Furthermore it provides immuno-conjugates containing such antibodies, which can be used to deliver target therapeutics thereto. Accordingly, these compositions that exhibit cytostatic and immunostimulant activities are useful for preventing or treating cancer in humans and in particular the treatment of ovarian cancer. This polypeptide sequence is a protein encoded by a human cancer-linked gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
       The invention relates to an isolated 0772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polymucleotides, fusion porteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polymucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein

cc encode. The nucleic acids (I) may be used for preventing, diagnosing and cutreating diseases related to their aberrant expression i.e. breast cancers. For example, (I) and (II) may be used to treat disorders comers. For example, (I) and (II) may be used to treat disorders come a pattent's genome that affect the activity of (II) by expressing compactive proteins or to supplement the patients own production of (II). Cl Additionally, (I) may be used to produce (II), by inserting (I) into a complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as antigens in the production of complementary. The host cell may also be used as antigens in the production of compression and therefore which patients may be in need of restorative contents. The host cell may also be used as antigens in the production of contibodies against (II) and in assays to identify modulators of (II)'s expression and activity. The anti-(II) antibodies, agonists and continued contents and activity and an activity and an activity and an activity and activity and an activity and activity

                                                                                 This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein

                                                                                                              Query Match
                                                                                                                                                                                                                                                                               Mitcham
Reed SG,
                                                                                                                                                        The invention relates to an isolated 0772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray
                                                                                                                                                                                                                                         New isolated 0772P polypeptides and polynucleotides, useful in gene therapy, particularly for treating or diagnosing cancer, e.g. ovarian

The invention describes nucleic acids (I) and the polypeptides (II) they CC encode. The nucleic acids (I) may be used for preventing, diagnosing and CC treating diseases related to their aberrant expression i.e. breast CC cancers. For example, (I) and (II) may be used to treat discorders CC cancers. For example, (I) and (II) may be used to treat discorders CC in a patient's genome that affect the activity of (II) by expressing CC inactive proteins or to supplement the patients own production of (II). CC Additionally, (I) may be used to produce (II), by inserting (I) into a CC complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acids in CC samples, and therefore which patients may be in need of restorative CC antibodies against (II) and in assays to identify modulators of (II)'s CC entrieon and activity. The anti-(II) antibodies, agonists and carcivity and as compositic agents for detecting the presence of (II) in samples (e.g. by immunoassay). This sequence represents a secreted ovarian carcinoma
                                                                                                 Query Match

The CA125 molecule, particularly the multiple repeat domains are useful as a gold standard for detecting and monitoring the CC domains are useful as a gold standard for detecting and monitoring the CC retains patients with ovarian cancer and other carcinomas where CA125 is expressed. The molecules are also useful for developing a vaccine CC against cancer. The present sequence is a CA125 repeat protein

                                                                                                                                                                                                                                                                                                                 This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein

Reed SG,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated O772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray technology. The present sequence represents a human ovarian carcinoma
                                                                                                                                                                                             gene tl

                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes nucleic acids (I) and the polypeptides (II) they CC encode. The nucleic acids (I) may be used for preventing, diagnosing and CC treating diseases related to their aberrant expression i.e. breast CC cancers. For example, (I) and (II) may be used to treat disorders CC associated with decreased expression by rectifying mutations or deletions CC in a patient's genome that affect the activity of (II) by expressing CC inactive proteins or to supplement the patients own production of (II). CC Additionally, (I) may be used to produce (II), by inserting (I) into a CC host cell and culturing the cell to express the protein (II). (I) And its CC complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acids in CC samples, and therefore which patients may be in need of restorative complementary sequences may also be used as antigens in the production of CC antibodies against (II) and in assays to identify modulators of (II)'s captession and activity. The anti-(II) antibodies, agonists and carcinoma compositic agents for detecting the presence of (II) in samples (e.g. by immunoassay). This sequence represents a secreted ovarian carcinoma
                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

These disorders include proliferative disorders, cancer, tumours, respiratory system disorders, casthma, haematopoietic disorders, diseases of the immune system, AIDS, CC inflammation, allergies, neurological disorders (e.g., Alzheimer's CC inflammation, allergies, neurological disorders (e.g., Alzheimer's CC disease, Parkinson's diseases), septic shock, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, kidney disorders, CC gastrointestinal disorders, angiogenic disorders, kidney disorders, CC gastrointestinal disorders, endocrine disorders and infections. The CC proteins can also be used to aid wound healing and epithelial cell CC proliferation, to prevent skin aging due to sunburn, to maintain organs CC before transplantation, to identify their cognate ligands or binding CC symptoms associated with the disorders mentioned above and in diagnostic communoassays e.g., enzyme linked immunosorbent assay (ELISA). The DNA of the invention is used in gene therapy. The present sequence represents a cCC human ovarian cancer antigenic fragment of the invention

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                  Score
